Abstract: To put an accurate diagnosis of human resources one should pursue the knowledge of human resources in terms of development, structure, conduct and efficiency of their use. The diagnostic process also requires knowledge and use of human resources indicators expressing human potential.

A source of labor, the human potential is the main factor of evolution, of economic growth and the main source of economic dynamics. The use of the human potential with its entire value is the essential key for an optimal valorization of material and financial means and of all the possibilities offered by the technological and financial resources of the company, leading to increasing efficiency in all its departments.

Keywords: human potential, human resources, active population, inactive population
