Abstract: This article is a message that we want to draw attention of many who should know something about issues such as "emissions of greenhouse gases", "global warming" "climate change". We proposed in this article, to make an overview of structures and processes to be known by the public and the policies and measures implemented by those responsible, so you'll find information about each of the 15 Conference of Parties (COP) to the United Nations Framework Convention on Climate Change (UNFCCC) respectively the 5 Meeting of the Parties (MOP) to the Kyoto Protocol. In Romania it is believed that it is sufficient to adopt regulations, to plan and evaluate environmental problems through environmental agreements or permits and impact studies, environmental issue being placed only on paper. Scale control of emissions of greenhouse gases can only be assessed on simple information on the process initiated by the UNFCCC.

Keywords: climate change, environment, flexible mechanisms, framework convention, subsidiary bodies.
