**Abstract:** Economically, along the years human society had continuously progressed for some countries, despite some dysfunctions more or less economical. One of the important causes of a positive evolution regarding economy was and still is, the development of some systems of production output, systems which applied within a certain social-economic context and cultural environment, proved to be extremely efficient. Two of these true models of organization and production functioning are the social system of mass production (American type) and the flexible production social system (German and Japanese). Both have been put into force and developed in most of powerful industrialized countries. A thing that had to be taken into consideration for Romania which from an economic, social, cultural, political outlook had to recover what had been lost during the years and not really regarded as such was and still is the fact that it must know, learn, appeal to other people's experience by all means. As far as industry is being concerned a powerful economy can hardly be imagined. We consider important the knowledge and put into practice one of the two output systems whenever necessary and possible.

**Keywords:** industrial firm, market economy, managerial performance, investment, output systems, mass social system of production, flexible social system of production.
