Abstract: The current control conditions of quality management system requires the development of new directions of development by implementing a quality information system linked to the driving forces in management. Quality management information system is a tool that is needed in the management of a company. This article highlights the main areas of movable and immovable property assessment activities within which they implemented the quality management information system in order to increase the power of decision in the management of a company. This is possible by creating an information framework that allows management and effective control using corrective and preventive actions in the course of the evaluation.

Keywords: information systems, assessment, quality management system, evaluation process.
