**Abstract:** Effective funding of research projects is a priority for all countries. It is essential to pursue those projects that provide useful results for society, optimal achievements supporting progress in the benefit of society. All results should be evaluated and analyzed in terms of how funding is justified. The efficiency of investments should be planned in correlation with the overall interests of the national economy, i.e. taking into account the multiple effects created in the downstream and upstream domain of the project. The meaning of productive efficiency, of resource utilization, varies by the organizational levels of the economy, by the interests that are pursued, and the coordinates where the action takes place.

**Keywords:** evaluation, research project, management
