Abstract: Specializations (qualifications) history of university education in Romania in the last 40 years, was marked by two political regimes, economic and social distinct. The year 1989 marked the beginning of profound changes in the Romanian university starting with replacing the term specialization with qualification, which is one of the components of the correlation process Romania to the European Qualifications Framework for lifelong learning, to diversity of specializations (occupations), the proportion of students in relation to other indicators and relation with economic and social environment. All these may be indicators of long-term effectiveness of government policies, health of education system and of the whole society.

Keywords: management and communication, quality level, economists engineering skills, the qualification of engineer-economist, growth paths, barriers to growth.
