

MUNCA ÎN TIMPUL STUDIILOR: FACTORI CARE INFLUENȚEAZĂ CĂUTAREA UNUI LOC DE MUNCĂ ÎN SPECIALITATEA STUDENȚILOR

WORKING WHILE STUDYING: FACTORS INFLUENCING STUDENTS SEEKING A JOB IN THEIR SPECIALITY

Conf.dr.ing. Bogdan RUSU
Universitatea Tehnică „Gh. Asachi” din Iași

Abstract: There are four categories of factors that discriminate students that work from those that do not: information search process for a job, specific activities that student may perform to enhance orientation for future employment, acquired skills and personal characteristics. Some students only searched for a job as others worked only during semester, holidays or both. The main difference in student behavior is due to its personal initiative in seeking employment, special circumstances that may determine learning of foreign languages and specific emotional, family related or socio-economic factors that would push the student into full employment. Only year of study and age triggered significant statistically differences.

Keywords: Work during studies, job seeking, specialty
